Functional Dentistry, A New Frontier for Independent Practices!

A Guide to Implementing Airway, Occlusion and TMJ Services for Improved Patient Care and Profitability, with Dr. Jeff Horowitz.

What is it that successful independent or small group dentists do that differentiates them from the DSO's and most of their competitors? The answer lies in offering services that others simply cannot. Functional Dentistry brings the disciplines of Airway, Occlusal, and TMJ services together in a way that can improve outcomes for your patients while adding new procedures for practice profitability. This course will introduce the concept of Functional Dentistry and how a basic understanding of the underlying disciplines can change a practice forever. A roadmap to understanding and implementing these services will be developed so that dentists can return to their practices with a plan to provide unique and sought-after care.

Course Objectives:

- Understanding Function as a primary mode of restorative failure.
- Proper history, exam and records to identify functional concerns.
- The basics of successful diagnosis/treatment for sleep disordered breathing
- Differentiating occlusal disease from temporo-mandibular joint disorders.
- Applying Functional Dentistry to treatment planning based on etiology of the condition.
